Summary

Android Developer Trainee with prior OJT experience contributing Kotlin and Jetpack Compose features to published game guides. Work includes LoL browsing/search, MLBB Firebase sign-in/sign-up, one-time purchases and ads, shared Kotlin event check-in, QR validation and client-side polygon checks within existing team codebases.

Skills

Mobile: Kotlin, Jetpack Compose, Kotlin Multiplatform, Compose Multiplatform, Java, Android SDK
Architecture and data: MVVM, Coroutines/Flow, StateFlow, Hilt, Koin, REST API Integration, Retrofit, Ktor, Room
Firebase and Google Play: Authentication, Cloud Firestore, FCM, Crashlytics, Remote Config, App Distribution, Play Console, Google Play Billing
Tools and environment: Android Studio, Git, Gradle, Linux Mint, Figma

Experience

HeroApps Software Development Services
Android Developer Trainee | May 9, 2026 - Present
Android Developer Intern (OJT) | February 12 - May 8, 2026

- **LoL Game Guide - Android development and monetization:** Extended champion browsing, filters, search and details in Kotlin/Jetpack Compose; configured scoped Hilt bindings. Created one-time donation/ad-removal products and integrated billing plus banner, interstitial and rewarded ads using existing shared components. Contributed game-data tooling and Remote Config version/force-update handling.
- **LoL release management - published team Android app:** Handled Google Play Console setup and internal, closed and open testing through production; distributed QA builds with Firebase App Distribution.
- **MLBB Game Guide - published team Android app:** Implemented Firebase email/password sign-in/sign-up and contributed Compose UI from team Figma designs. Contributed localized resources/data and patch-note tooling within the existing multi-module project.
- **EarnPH - internal testing:** Extended commonMain event joining and REST API integration, including QR validation/check-in using the existing KScan scanner. Integrated client-side polygon ray-casting checks with existing location updates, extended inherited OTP flows and integrated Android FCM/client notifications.
- Collaborated with senior/backend developers, PMs and QA testers on ticketed features, feature branches and the team's pull-request/merge workflow.

Projects

DevDeck - personal portfolio: Live website and Android APK on GitHub Releases, with shared Kotlin/Compose UI, Koin, StateFlow, responsive layouts, skill filters and theme switching. github.com/johnrusselguiwan-dev/DevDeck.

CN-Karigusan - academic Android project: Java and Android SDK tourism guide for swimming destinations in Camarines Norte, including destination data and pricing.

Education

Camarines Norte State College | AY 2022 - 2026
Bachelor of Science in Information Systems | GWA: 1.5471 | College Scholar
Academic Distinction; Best in OJT; Best in Capstone Project (Museo Bulawan MIS)
